Supervised By :
Dr. Preeti Saini

Department of Computer Science and Engineering,
Chitkara University, Punjab

Secret Box is a privacy-first platform where users can receive anonymous messages through a unique link. Senders don't need to log in, ensuring complete anonymity. Users can personalize their message page, manage the received messages, and get notifications for new messages — all while maintaining full control over their privacy.

We gathered feedback from users across different backgrounds. Many shared that they feel uncomfortable sharing honest opinions on public or traceable platforms. A common concern was the fear of being judged or exposed. Users expressed the need for a space where they could communicate freely without worrying about privacy. They also wanted tools to control who could send them messages and how they manage these interactions.

In many online spaces, people are afraid to express their true thoughts, opinions, or confessions because they worry about being judged or identified. Most messaging platforms require users to sign up and share personal details, which discourages open communication. There is a need for a platform where people can share their feedback or feelings freely without compromising their identity or safety. At the same time, users want control over who can contact them and how their messages are managed. Secret Box addresses these challenges by offering a secure, anonymous messaging experience that prioritizes privacy and user empowerment.

- Identified user privacy needs and communication gaps.
- Planned APIs, database structure, and user experience flows.
- Built frontend and backend with Next.js, integrating OTP and email notifications.
- Ensured functionality, performance, and security through rigorous testing.
- Hosted on scalable platforms like Vercel and AWS.
- Regular updates based on user feedback and monitoring.
- Documented the development process for future improvements and team collaboration.

- Anonymous messages without signup
- Unique link to receive messages
- OTP-based secure login
- View, manage, and delete messages
- Inbox Management
- Profile Customization
- Encrypted passwords and secure sessions
- Admin Dashboard
- Clean UI with responsive design with dark mode support

Three-Tier Architecture

Presentation Tier

- React Components
- Shadcn/UI
- Tailwind CSS
- Framer Motion
- Dark Mode Support

Application Tier

- Next.js API Routes
- NextAuth.js
- Middleware
- Zod Validation
- Route Protection

Data Tier

- MongoDB Atlas
- Mongoose ODM
- User & Message Models
- Cloudinary (Images)
- Resend (Emails)

Secret Box offers a safe space for people to communicate openly without fear of judgment or exposure. It empowers users to personalize their messaging experience while ensuring complete privacy and control. Based on user feedback, there is a clear demand for such a platform, and our approach ensures a secure, user-friendly solution that encourages honest and anonymous communication.

Thank You
